

The Problem

INSULATION GAP

The U.S. DOE, ENERGY STAR®, and other industry experts agree that the attic is the number one cause of energy loss in homes today.

If you have an attic pull down

ladder or access hatch panel, you have reduced the thermal barrier of your attic by as much 35-55%. You also have a source for tremendous air leaks and drafts.

This is a huge portal for energy loss that is open every day – an expensive problem. You are needlessly spending money to cool your attic in the summer and heat it in the winter. You need to seal and insulate this hole in your attic insulation envelope.

These attic accesses cause drafts, cost you money, and reduce the effectiveness of your furnace and air conditioning units.

HERE'S HOW IT AFFECTS YOU:

- The attic access door or hatch is the entryway to a zone of extreme temperatures in summer and winter!
- These openings are channels for the superhot and supercool air to leak from your attic to your living space!
- Your upstairs stays hotter than your downstairs, your air conditioner is overworked all summer long, and your utility bills are too high!

About Insulation

Attic insulation is designed to provide a "thermal barrier" between you and extreme conditions in your attic. The level of protection is measured in R-Value – higher is better.

An unprotected attic entryway dramatically reduces the effective R-Value of your attic insulation – by 38% for a hatch, 55% for a pull down ladder.

In other words, if you have R-38 insulation installed in your attic, it is reduced to R-23.6 if you have an unprotected hatch, R-17.1 if you have an unprotected pull down ladder.

The Energy Guardian™

SLASH HEATING & A/C BILLS

energ^gsmart

super-efficient foam insulation solutions

The Solution

The Energy Guardian™ from energsmart is the complete solution for your attic. With it, you can slash your heating and air conditioning bills and improve the comfort of your home... Instantly!

- Two models – one for attic ladders, and one for attic access panels/hatches
- R-30 insulation rating
- Create a tight air seal to eliminate drafts
- Lifetime warranty
- Provides a protective barrier from extreme attic temperatures
- Awarded for Environmental Excellence
- ENERGY STAR® sealant and insulator

Make your home more comfortable, conserve energy, and save money with our proven, effective solution. Let us show you how!

WITH THE ENERGY GUARDIAN™ FROM ENERGSMART, YOU'LL RECEIVE:

- Professional installation scheduled at a convenient time for you
- Trained professionals for excellent results
- Seal air leaks in attic entryway frame and adjacent areas
- Inspect entire attic for improperly installed insulation – even out blown insulation and return removed insulation
- Provide suggestions for other improvements to prevent attic energy loss

super-efficient foam insulation solutions

Our Customers Said it Best!

Sandy from PA

"Our second floor was always hotter in the summer and colder in the winter. I never knew why. Your product changed things as soon as it was put in. It was in the 90°s for a week, and the second floor stayed cool. I had no idea that such a small thing could make such a big change for the house!"

Jerry from DE

"We installed a new hot tub and use it three times a week. I cringed when I got our first utility bill. To my surprise, the next month it went down 10%! Then I remembered that we had installed **The Energy Guardian™**. Even our air conditioner did not go on as often as it did before."

Tom from NC

I'm in the insulation business. Pull down ladders, attic floor fans, and trap doors are big insulation problems, and there was no easy and effective solution until now. This product is a real breakthrough. I've done my first installation of each product. Each was a snap. I am very impressed."

Dave from NH

"I got **The Energy Guardian™** and put it together easily. We noticed a difference in the room where the pull down stairs are located as soon as it was installed. Just in time, too – because we had the coldest night of the month that night. The heating system works better than ever."

Ruth from PA

"We installed **The Energy Guardian™** on a cold winter's day. The rooms on our second floor were drafty on cold days, but I didn't realize that it was due to the attic access. Within minutes of installing it, the upstairs was much warmer. In fact, the entire house became so much warmer that I turned down the thermostat several degrees and the house was still warmer than before. We have had the same success in the summer months as well. We save an average of 30% on our utility bills in both summer and winter."

Mike from KS

"I was confident that **The Energy Guardian™** would make a difference in the winter, and it did. But was really surprised at how cool my daughter's room stayed all summer long. I don't know how much money that I've saved, but the air conditioner comes on much less often than it used to do. Thanks for a great product!"

Jean from PA

"Wow! What a difference! Since **The Energy Guardian™** has been in our attic, our A/C runs a lot less. The house stays much cooler and we are excited to see our electric bills go down! We even removed the door to see if the house would stay cool without your product, but it didn't. This goes to show you **The Energy Guardian™** is a great investment."
